

## **Wolf River Valley Seeds Announces New Treatment Package for Soy**

Recent advancements in seed treatments have kept up with improvements in genetics and trait technology establishing a more secure investment when it comes to seeds. At WRVS we offer pre-inoculant soybeans utilizing the Marauder® Soybean Inoculant System which provides three strains of bacteria to aid in nodulation along with a biological enhancer.

Responding to a higher incidence of white mold and sudden death syndrome in 2018 and 2019, WRVS is now offering a new “full spectrum” treatment option. This option includes an F&I White Mold and SDS treatment option that includes an insecticide, three fungicides and Heads Up®, a non-microbial treatment which has been proven to enhance growth which helps reduce the severity of white mold and sudden death syndrome.

For more information on these yield enhancing treatments please give Joe or Pat a call to discuss at 1-800-359-2480.
